Major: Information Systems and Technologies

Skills

Languages:

JavaScript, TypeScript

Technologies:

Webpack, Docker, Git, GitHub Actions, OpenAI API

Form Libraries:

Formik, Redux-Form, React Hook Form

Frameworks and Databases:

React (React Router, Redux, Redux Toolkit, React Hooks), PostgreSQL, GraphQL

CSS Frameworks and Libraries:

HTML5, CSS3, Bootstrap, Tailwind CSS, Material-UI

Projects

Social media [🔗](#)

Stack: React, CSS, JS, Formik, Axios, UUID, Yup.

The platform enables users to communicate, share posts, and connect with new friends. The prototype includes the following main components:

Messenger: Users can send messages to each other, exchange information, and stay in touch. The messenger implementation involves creating an interface for sending and displaying messages.

Home Page: Here, users can view their news feed with the latest posts and switch to the "Friends" tab, displaying their list of friends. The home page also provides user information, including their biography and other profile details, with the option to add or edit their status.

User Profiles Page: On this page, users can browse profiles of other users. They can follow or unfollow these users to keep track of their activity and receive updates.

To-Do List [🔗](#)

Stack: React, TypeScript, UUID, Material-UI.

It represents a to-do list where users can create multiple task lists, add, edit, and delete tasks within each list. Users can also mark tasks as completed and filter tasks by status: all tasks, active, and completed.

Profile

I am a third-year student at ITMO University, currently focusing on frontend development and learning React. I have experience organizing events, including conducting knowledge level tests, assisting with the orientation of freshmen, and collaborating effectively within a team. I also possess skills in working with databases, including proficiency in SQL and hands-on experience with PostgreSQL. Additionally, I have practical experience in backend development using C# and Java.
